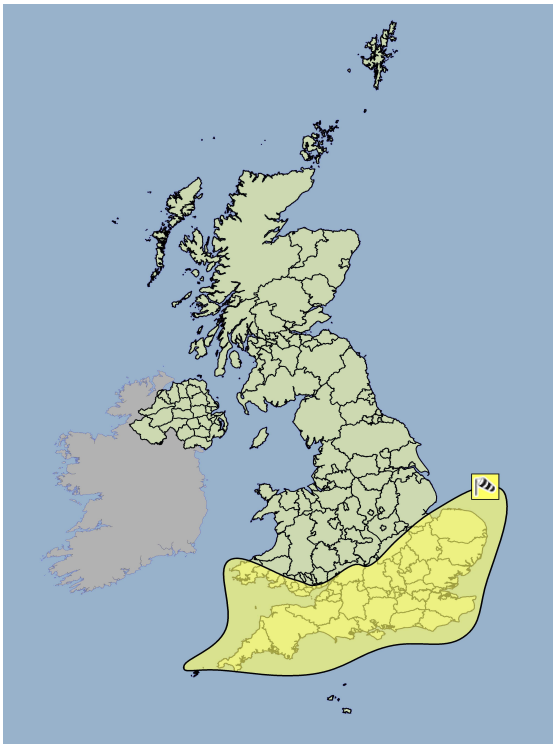
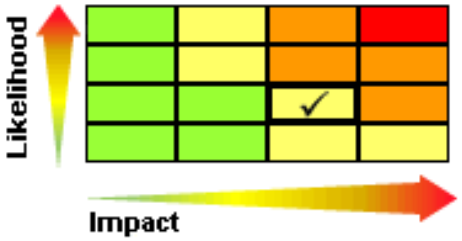
National Severe Weather Warning Service





Chief Forecasters Assessment
Another storm runs northeastwards across western and northern parts of the UK during Friday and into Saturday, before clearing to the northeast. Around the southern flank of this storm very strong southerly or southwesterly winds are expected to develop, primarily affecting southern and southeastern counties of England. There remains some uncertainty in the track and timings of this system but gusts of 60-70 mph are possible with perhaps 80 mph along most exposed parts of the south coast of England. With these strong winds some large waves are also likely along the south coast and there is the potential for some coastal flooding where this coincides with high tides. The warning area has been increased to include parts of South Wales and some other parts of south east England and the Midlands.

The Met Office have issued a **Yellow Warning** of **Wind**

Valid from **15:00 on Fri, 14th Feb 2014** until **12:00 on Sat, 15th Feb 2014**

A further period of very strong winds is expected across southern England and parts of South Wales and the Midlands from Friday afternoon, overnight into Saturday morning. Gusts of 60-70 mph are possible, especially in coastal areas, with 80 mph possible along most exposed English Channel coasts (see separate Amber Warning). Winds will ease from the west during Saturday morning.

The public should be aware of the potential for disruption to travel as well as trees being uprooted. The very strong winds will be accompanied by large waves along the south coast and the public should be aware of potentially dangerous conditions and also the possibility of coastal flooding.
